Test sheet: the mark-axis rule for symmetric below marks

The mark-axis rule puts a symmetric above mark's anchor X exactly on its axis ($k = K$, no threshold). This sheet does the same for the mirror-symmetric below marks, with $K = -12$ in semibold italic (the style's below marks are drawn with it, as its base anchors are). The tacks U+0318, U+0319, U+031D, U+031E are decided and left out. Green ("now"): the patched fonts before the rule (2026-11-12). Red ("exact"): every symmetric below mark exactly on its axis (the centre of its ink bounds with the slant removed). Grey: the designer's precomposed letter, overlaid with now and exact.

$k - K$ now, in units (positive: the mark lands right of the base's axis, and exact moves it left)

mark	Regular	Italic	Semibold	Semibold italic
◌̖ plus sign below	-2	+4	-2	-2
◌̗ minus sign below	+2	+2	+2	-4
◌̣ dot below	+0	+1	-0	+3
