Test sheet: the stem-axis rule on m, I, T, ɪ

Candidates for the central-stem letters: m (its middle stem), I, T and ɪ, above and below. The stem's midline comes from its straight edges (control points); in semibold italic m the middle stem has one straight edge, and the midline is that edge moved by the median half-width. Grey: the designer's precomposed letter. Green: the patched fonts now (designer, candidate or curated anchor). In the italic styles, blue: the rule at the declared slant (12°, 11.5°) from the end of the stem's straight part; red: the rule at the stem's own angle (the midline extended). In regular and semibold the two are the same (red, "rule"). Composed letters are base + CGJ + mark (HarfBuzz would otherwise substitute the precomposed glyph); capitals take the `.cap` accents. The overlays draw red last, so where only red shows the variants coincide; the columns show each one alone. Numbers: composed minus precomposed, in units, the horizontal centre of the mark with the slant removed (positive: right of the precomposed accent).

Regular: m U+006D stem 0.0°; above X now 392, rule 404 (+12); below X now 402, rule 404 (+2)
